

order, a present status of processing for delivery of said product corresponding to said order, a present status of processing for payment processing for said trading, and the trading identifier; and

an updating device for comparing said trading identifier included said trading information with said trading identifier included in said trading processing information, and outputting a warning if they are not coincident, and adding said trading processing information to said trading information stored in said storage device if they are coincident.

--38. A client according to claim 37, further comprising:

a coincident check device for comparing said data on the contents of said order with said present status of processing for the processing initiated for said order, said present status of processing for delivery of said product corresponding to said order, and said present status of processing for the payment processing for said trading included in said trading processing information, and outputting a warning if erroneous conditions are included.

--39. A client according to claim 38, further comprising:

a transmitting device for sending to said server a transmission request for trading processing information including the trading identifier included in said trading

information received from said server in order to receive said trading processing information from said server.

--40. A client according to claim 39, wherein said transmitting device transmits a time at which said trading processing information is to be received, together with said transmission request for said trading processing information.

--41. A client according to claim 37, wherein said server includes a shopping server dedicated to sales of products in the electronic commerce, a payment managing server dedicated to payment processing for said sales of products in response to an instruction from said shopping server, and a delivery managing server dedicated to delivery processing in said sales of products in response to an instruction from said shopping server, and said trading information includes destination addresses of said shopping server, said payment managing server, and said delivery managing server.

--42. A client according to claim 37, further comprising:

a reordering device for displaying said trading information, selecting a portion of information from said trading information, creating new order information by modifying said selected information, and transmitting said new order information to said server.

--43. A storage medium having an electronic commerce support program provided in a client connected to a server for providing electronic commerce services to receive the

electronic commerce services, said program being readable by a CPU in said client for managing the electronic commerce, said storage medium comprising:

a storage component having a code sequence for realizing the step of transmitting an order for a product on the electronic commerce in response to an input by a user to said server through a communication network, receiving from said server trading information including a trading identifier associated with said order and data on the contents of said order from said server, and storing said trading information in a storage device;

a storage component having a code sequence for realizing the step of receiving from said server trading processing information including a present status of processing for processing initiated for said order, a present status of processing for delivery of said product corresponding to said order, a present status of processing for payment processing for said trading, and the trading identifier; and

a storage component having a code sequence for realizing the step of comparing said trading identifier included said trading information with said trading identifier included in said trading processing information, and outputting a warning if they are not coincident, and adding said trading processing information to said trading information stored in said storage device if they are coincident.

--44. A storage medium according to claim 43, further comprising:

a storage component having a code sequence for realizing the step of comparing said data on the contents of said order with said present status of processing for the processing initiated for said order, said present status of processing for delivery of said product corresponding to said order, and said present status of processing for the payment processing for said trading included in said trading processing information, and outputting a warning message, if erroneous conditions are included in any of said present status as a result of said comparing, including information of erroneous status.--
